

Ear Piercing Aftercare

1. Leave your jewelry in place for at least six weeks.

- Removing your earrings too early may cause the piercings to close prematurely.

2. Gently wash your piercings with a mild, fragrance-free cleanser and water twice a day.

- Wash front and back of piercing and gently rock earrings back and forth while cleaning.

super important!

- ★ Wash hands before cleaning piercing to help prevent infection and gently clean with fingertips. ★

Tips and Tricks

After cleansing, rotate piercing.

Be mindful of clothing.

Choose soft, breathable fabrics and ensure that the earrings are not getting caught on clothing or bedding. Avoid high-necked garments or anything that could rub against the earrings and cause irritation.

Avoid submerging ears in water, such as in pools, bathtubs, lakes, etc. for 2-3 weeks.

While a gentle shower is fine, submerging can increase the risk of infection.

After 6 weeks, you may change your earrings, but avoid heavy earrings for 4-6 months.
